8 Essentials to a Well-Managed Project:

- 1 Establish Project Objectives:** Establish project objectives early and ensure stakeholder signoff.
- 2 Design a Project Plan:** The schedule is akin to the set-list and it's the core to the project. It should include all tasks, milestones, timelines, & resource requirements.
- 3 Communicate Effectively:** Be proactive. Anticipate and address stakeholder needs preemptively.
- 4 Be Engaged:** Reliability builds trust and trust is a key component of an excellent client experience.
- 5 Be Reliable:** Avoid colloquialisms and culturally specific humor. What works in one culture might not translate well in another, leading to confusion or disengagement.

6
